Project Design Phase-II Solution Requirements (Functional & Non-functional)

Date	16 October 2022
Team ID	PNT2022TMID36078
Project Name	Visualizing and Predicting Heart Diseases with an
	Interactive Dash Board
Maximum Marks	4 Marks

Functional Requirements:

Following are the functional requirements of the proposed solution.

FR No.	Functional Requirement (Epic)	Sub Requirement (Story / Sub-Task)
FR-1	User Registration	Registration through Form
		Registration through Gmail
		Registration through LinkedIN
FR-2	User Confirmation	Confirmation via Email
		Confirmation via OTP
FR-3	User verification	Verification through CAPTCHA Verification through I'm
		not a robot.
FR-4	User Authentication	Recognition of correct person Resending the code in
		case of forgot password.
FR-5	User validation	Reconfirming the new password Sending a two digit
		number in (Google account) your Old devices, so that
		you can enter into a new device By entering the two
		digit number.
FR-6	User Submission	Submission through Google form Submission through
		Email.

Non-functional Requirements:

Following are the non-functional requirements of the proposed solution.

FR No.	Non-Functional Requirement	Description
NFR-1	Usability	The EHDPS predicts the likelihood of patients getting heart disease. It enables significant knowledge, eg, relationships between medical factors related to heart disease and patterns, to be established.
NFR-2	Security	When it deals with(comes to)health factors, we should provide more security services. There shouldn't be no errors, lagging, base of data of a patient profile, while working on the software or product.
NFR-3	Reliability	Our app is made accessible whenever needed. It Responds within the time frame needed It is regularly updated or modified as needed by the user. Provide security and privacy to the extent

		needed by the user. Provide bug free operation that
		is simple and easily predictable
NFR-4	Performance	The performance should be fast relaying. This
		prediction system should be made available in cloud
		to ensure better accessibility and setting a milestone
		in providing good quality affordable healthcare.
NFR-5	Availability	By setting up An Application Performance
		Monitoring (APM) system that helps to monitor the
		availability of application. Consistent performance
		monitoring and optimization help you to tackle
		issues as quickly as they show up.
		The Availability of getting used to this software or
		product design is through by accessing IBM cognos
		Analytics and IBM cloud.
NFR-6	Scalability	A scalable app can easily accommodate double,
		triple, or even ten times its current amount of users
		by withstanding no crashes, no downtime, Fast
		loading speeds, Top -notch security. We're gonna
		make our app more scalable by using right Tech
		stack & Infrastructure scaling to process millions of
		data with bug free , multiple database servers that
		accommodate millions of user to secure our app's
		fail -safe performance, using caching and stateless
		approach to reduce the load, Content Delivery
		Networks (CDN) to minimal response time
